

## **H1N1 Vaccine - November 11, 2009**

New London Hospital has a limited supply of the H1N1 vaccine in stock. The vaccine is available as an inactivated shot or a “live” intranasal spray. NLH will vaccinate high-risk groups as identified by NHDHHS & the Centers for Disease Control and Prevention: Pregnant women, healthcare workers with direct patient contact, EMS personnel, people aged 6 months to 18 years with underlying health conditions, such as asthma and heart disease, which put them at risk for complications.
