

URINE SPECIMEN COLLECTION

Urine for GC/Chlamydia – DNA Testing

1. The patient should not have urinated for at least 1 hour prior to sampling.
2. Direct the patient to provide a first – catch urine (approximately 20 -30 mL of the initial urine stream) into a urine collection cup.
 - Females should not cleanse the labial area prior to providing the specimen.
 - Larger volumes of urine should *not* be collected.
3. Refrigerate urine sample.
